

Job Title: Cloud Engineer – Observability & Datadog

Location: Mumbai

Experience: 2–3 Years

Company: PibyThree (πby3) Consulting Services Pvt Ltd

Website: www.pibythree.com

About Us:

πby3 is a cloud transformation company helping enterprises build future-ready solutions with deep technology expertise, optimized cost, reduced risk, and strong delivery ownership.

Job Description:

We are looking for a Cloud Engineer with hands-on experience in cloud infrastructure, observability, and monitoring tools. The ideal candidate should have experience with Datadog, cloud platforms (AWS/Azure/GCP), Linux, scripting, and CI/CD practices.

Key Responsibilities:

- Manage and support cloud infrastructure across AWS, Azure, or GCP.
- Configure and maintain Datadog dashboards, monitors, logs, traces, and alerts.
- Improve observability practices and system monitoring standards.
- Troubleshoot infrastructure, application performance, and reliability issues.
- Collaborate with DevOps, SRE, and development teams.
- Support CI/CD pipelines and automation initiatives.
- Participate in incident response and root cause analysis.
- Maintain monitoring and infrastructure documentation.

Required Skills:

- 2–3 years of experience in Cloud Engineering, DevOps, or Infrastructure roles.
- Hands-on experience with Datadog.
- Good knowledge of AWS, Azure, or GCP.
- Understanding of monitoring, logging, tracing, and observability concepts.
- Linux administration and networking basics.
- Scripting knowledge in Python or Bash.
- Exposure to CI/CD tools and automation.

Nice to Have:

- Kubernetes or Docker experience.
- Terraform or CloudFormation knowledge.
